Apex Systems - Proposal for FlowCore Enterprise

Response to RFP-2026-017: Procurement Workflow Automation Platform for GreenLeaf Retail Pvt. Ltd. Requirement: 500 users, 3 regional offices, SAP S/4HANA plus supplier-portal integration, go-live within 8 months, 3-year term. All prices in INR lakh, excluding GST.

1. Executive Summary and Understanding of the Requirement

Apex Systems proposes FlowCore Enterprise, a workflow automation platform built on Kafka-based microservices running on Kubernetes. We understand GreenLeaf needs purchase-to-pay and supplier onboarding flows for 500 users across three regional offices, with bidirectional synchronisation to SAP S/4HANA and a secure supplier portal.

2. Proposed Solution and Implementation Approach

The architecture separates the workflow engine, the SAP integration layer and the supplier portal. The SAP connector is certified and uses asynchronous retries with dead-letter queues. Load testing was run to 2,000 concurrent users in our lab, so the 500-user requirement has 4x headroom. The platform runs active-active across two availability zones with a contracted 99.95% monthly SLA, RPO of 5 minutes and RTO of 30 minutes.

Implementation follows four stages: discovery, configuration of three regional approval matrices, SAP integration build and test, and phased cutover. Each stage ends with a documented sign-off by GreenLeaf.

3. Timeline, Team Structure and Milestones

Total duration is 9 months. Milestone M2 (SAP integration in test) slipped by one month in our last comparable engagement; we have included one month of contingency in the plan, so go-live is at month 9, one month beyond the 8-month target.

Role	Headcount	Responsibility
Delivery lead	1	Plan, governance, escalations
Solution architects	2	Integration design, security design
Developers	6	Workflow build, SAP connector configuration
Test and QA	3	Functional, performance and security testing
Trainers and change	2	Role-based training, adoption support
Support engineers	1	Hypercare shadowing

Total team size is 15 people. Milestones: M1 design sign-off (month 2), M2 SAP integration in test (month 5), M3 pilot office live (month 7), M4 full go-live (month 9).

4. Price Table and Assumptions

Item	Amount (INR lakh)
Licences (3 years)	1,100
Implementation services	1,350
Training	150
Support (3 years)	800

Total	**3,400**

Assumptions: GreenLeaf provides SAP sandbox access within 4 weeks of kickoff; change requests beyond 10% of effort are priced separately at the agreed rate card. Prices exclude GST and travel.

5. Security, Compliance and Risk Controls

FlowCore Enterprise holds ISO 27001:2022 and SOC 2 Type II certifications (reports available under NDA). Controls include role-based access with MFA for all users, AES-256 encryption at rest and TLS 1.3 in transit, and an 8-year immutable audit log. We run independent penetration tests twice a year; the latest report found no critical issues. Data is stored in India-region data centres.

Key delivery risks: SAP sandbox availability (mitigated by an early environment request), change in approval matrices during build (mitigated by a frozen design at M1), and supplier-portal onboarding volumes (mitigated by load tests already completed).

6. Support Model, Relevant Experience and References

Support runs 24 hours a day, five days a week (Monday to Friday), with a 1-hour response for severity 1 incidents. We have delivered 22 comparable deployments in manufacturing and retail. Two named references are available on request: a national retail chain (420 users, eight sites) and an apparel manufacturer (600 users, SAP ECC migration to S/4HANA).
